

# Transfer of Ownership of Metering Activities from Delivery Body to CM Settlement Body

23 July 2024

Bir Virk (ESC) & Jane Rolfe (EMRS)

# Processes and System Enhancement: Metering Process Transfer

Improving Settlement Body data to reduce settlement and Stress Event Risk

Transfer of roles and responsibilities from the Delivery Body to CM Settlement Body:

Metering Aggregation | Metering Assessment | Metering Test | DSR Component reallocation

**High-level benefits:** Opportunity to make processes less complex to benefit Capacity Providers

**Knowledge and expertise:** Data validation by subject matter expert in the correct system

**Settlement processes:** Metering data being used for processes stored in the same system

**Improved customer experience:** Clarity on Delivery Partner accountability & metering process ownership

**Data submission simplified:** Metering obligations to be submitted post agreement simplifying obligation and customer risk at prequalification

**Quicker efficient data access:** No data transfer interface required for settlement

**Reduced operational cost:** Removal of manual workarounds to fix issues

**Reduced settlement / Stress Event risk:** No settlement delay risk as data correction and manual workaround reduced.

**Status: Monday 29 July 2024 – deployment date**

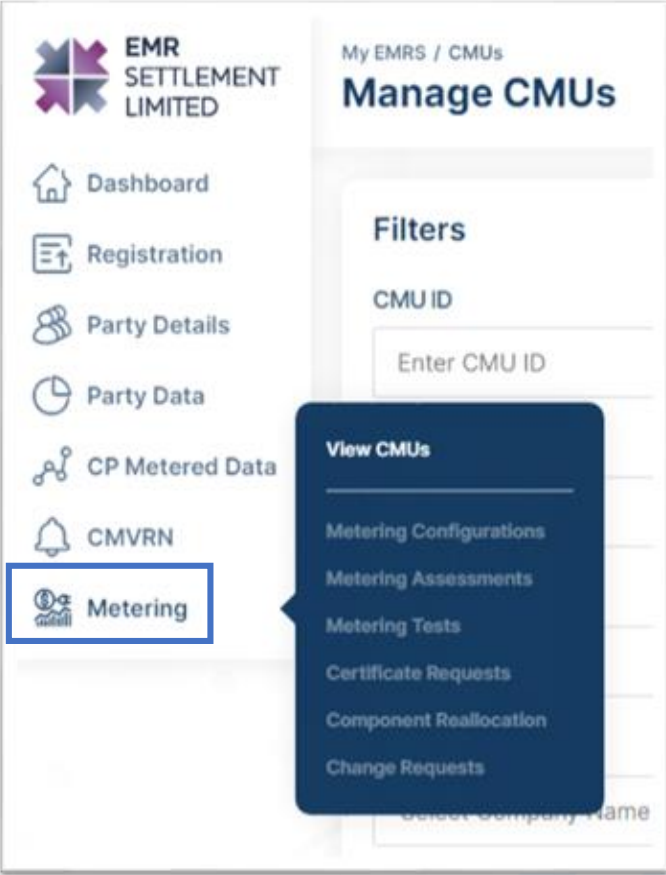

Additional functionality in My EMRS to accommodate metering process transfer changes

**Engagement Critical: Feedback required on this process enhancement & further areas to prioritise improvement**

# Impacted Processes

EMRS will be operating the activities below and Capacity Providers will be using [My EMRS](#):

- Metering Arrangements
- Metering Assessments
- Metering Test
- Metering Test Certificate
- Change Request
- Metering Aggregation Rules
- DSR Component Reallocation

Termination events for non-delivery of Metering Assessments or Metering Test Certificates will still be managed by the EMR Delivery Body.

## CMU Details

CMU ID	CMU908
CMU Type	Refurbishing Generating CMU
Company Name	Capacity Provider 08
Transmission Flag	Distribution connected
Connection Type	Non-CMRS
Status	Pending Metering Assessment

## Metering Assessment

The Capacity Provider is required to provide answers to all relevant Metering Assessment questions and upload the single line diagram(s). This is to determine if a Metering Test is required or not. We have provided supplementary information in [G1 – Capacity Market Metering](#) to aid with any of the technical information.

### Proposed Metering Option

Select which of the four metering pathways is to be used to monitor the performance of the proposed CMU Component.

### Description of Metering Arrangements

Provide a brief description of the metering arrangements including their main intended purpose (for example Operational, STOR, Landlord/Tenant billing etc) and any standards / specification which are applicable)

### Where you have an approved Metering Dispensation under the BSC please provide the reference number (D/###)?

The purpose of the question is to be able to confirm that a valid Metering Dispensation is in place if applicable. Can be left blank. Answer has no impact on requirement for Metering Test

### Do you have any connections to the CMU Component that are not part of the Metered Entity Identifiers (MEID) list provided to be used in the aggregation rule for the CMU?

### Do you have any ineligible generation behind a Meter Point (i.e. would be included in the metered data of a Metered Entity Identifier used by the CMU Component)?

### Meter Used for other Purposes

Are your meters used for any other purposes. Select Yes or No If Yes is selected, provide further information specifying why the meter is used for other purposes.

### Are you using a BSC Settlement submission route (i.e. D0357 MPAN flow or BMU) for all your CMU metered data?

# Capacity Market Metering Register

The Capacity Market Metering Register will be published on the [Settlement Data for Capacity Providers](#) webpage and will be made available once [My EMRS](#) is operational.

## Capacity Market Metering Register ▼

On behalf of Electricity Settlements Company, we publish the Capacity Market Metering Register. The register maintains details that are essential in the administration and settlement of the Capacity Market, including:

- Metering Test requirements
- Metering Assessment requirements
- Status of DSR Components
- Metering identification codes and if there are any changes to these

The Capacity Market Metering Register validates metered data to ensure Capacity Providers are complying with Chapter 7 of the Capacity Market Rules.

The Capacity Market Metering Register will be published on the EMRS website in accordance with the timeframes as set out in the Capacity Market Rules.

For more information about the register, please see [\[insert guidance link\]](#).

[\[‘Download’ button\]](#)

# What else will we do to support Capacity Providers?

Email campaign confirmed implementation date of 29 July 2024.

Updated Guidance and Working Practices published on **29 July 2024**.

EMRS Website Stakeholder Support for CPs updated on 29 July 2024.

On **10 September 2024** we will host a Webinar on Key processes and functionality. This will also highlight Pre-Delivery Year Activities.

Q&A for CPs based on feedback we have received.

Publish additional resources e.g training videos, slide decks and Q&A document.

**August**

**July**

**September**

Publish Capacity Market Metering Register.

Supporting Information published on EMRS Website and we will address any feedback from CPs.
