Purpose For information

Summer 2017 Baseload Market Reference Price published

The Baseload Market Reference Price (BMRP) for summer 2017, which covers April 2017 to September 2017, is as follows:

Season	BMRP
Summer 2017	43.52 £/MWh

This is now available on the [Settlement Data](#) page of the EMRS website.

Who does this impact?

CFD baseload Generators.

How will the BMRP be used?

BMRP is used to calculate CFD payments for baseload Generators. When the BMRP is below a pre-agreed £/MWh value (Strike Price), as set out in a CFD Generator's contract, top-up payments are made by [Low Carbon Contracts Company](#) (LCCC) to the CFD Generator to make up the difference between the BMRP and the Strike Price. When the BMRP is above the Strike Price, the CFD Generator pays LCCC the difference.

How is the BMRP calculated?

EMRS calculates the BMRP on behalf of LCCC. The BMRP is calculated on a seasonal basis in accordance with the [Contract for Difference Standard Terms and Conditions](#). BMRP for winter 2017 will be published in October 2017. Baseload prices are calculated using a traded volume weighted average based on forward season data received from [LEBA](#).
